

Domino's Pizza chooses Bodet Software time and attendance solutions

Domino's Pizza, the worlds leading pizza delivery company, has selected BODET Software for 3 franchises in Toulouse employing a total of 60 people.

« We are very delighted with the Bodet system and have total confidence and peace-of-mind in the technology. The benefits to us were immediate.»

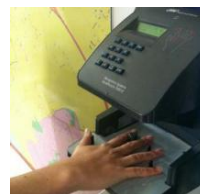

In order to record the employee time, attendance and absence Gilles Bourbigot, Manager of Toulouse Domino's Pizza, was looking for a simple to use Time and Attendance system that allowed him to **track working time** of his team.

After numerous solutions were tested, Bodet Software with Hand Scan terminals was selected, having proved to be the **leading solution**. Bodet was successfully installed in June 2010.

The system was quickly adopted by the staff due to its simplicity. The Hand Scan terminals also allowed the Domino's team to check-in without identification badges.

The management of the 3 Domino's Pizza franchises save a significant amount of time which is now devoted to customer service.

In comparison with the former manual record system the payroll processing has been reduced from 2 weeks to less than 5 days – this benefits both employees and management.

Today, Gilles Bourbigot, recommends the Bodet Time and Attendance solution to other Domino's Pizza franchises.

Gilles Bourbigot says: "We are **very delighted with the Bodet system** and have total confidence and peace-of-mind in the technology. **The benefits to us were immediate**. An independent Domino's franchisee has little time to perform administrative tasks. The Bodet software solution automates time and attendance and meets my requirements as an owner, employer and manager".

ABOUT BODET SOFTWARE

Bodet Software develops and integrates IT solutions in three fields:

- Time and attendance management solutions and human resources optimisation (Kelio software suite)
- Building security and access control solutions
- Monitoring and production management solutions (Osys software suite)
