

# The Centre International de Deauville has optimised its schedules using Kelio

The Centre International de Deauville is a conference centre that plays host to 180 events a year, including the Deauville American Film Festival.

***“We have a simple, reliable tool that allows for optimal planning.”***

## Selecting a solution adapted to the organisation and the C.I.D’s collective agreement

Opened in 1992, the Centre International de Deauville (C.I.D) is a 18,000 sq.m. conference centre that plays host to some 180 events a year and has a turnover of 10 million euros.

The C.I.D team consists of **38 permanent employees** and **up to 248 people during major events** such as the American Film Festival.

*“We organise a wide range of events and our teams perform a variety of tasks so **optimal planning is vital** to provide a quality service. We used Excel for planning and it became difficult to manage. We needed a simpler, more reliable way to monitor our schedules”,* explains Bruno Villaverde, Secretary General of the Centre International de Deauville.

To address its planning issues, C.I.D approached several companies before selecting Bodet Software’s time and attendance, planning and analytical working time monitoring solutions (Kelio Optima, Planning+ and Analytics+). The C.I.D also installed clocking terminals to **check actual**

working time and employee attendance on site for security reasons.

*“We chose Bodet Software because of its reputation and because **we could adapt the Kelio solution to our organisation, needs and specific collective agreement**”,* explains Bruno Villaverde.

### In brief

#### Context

Activity:	Conference centre
Staff:	38 permanent and up to 210 temporary
Solution:	Kelio Optima Kelio Planning + Kelio Analytics+

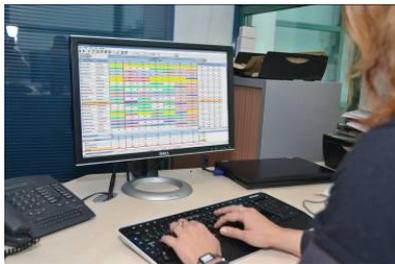

#### Advantages

- Efficient planning management
- Legislative compliance
- Analytical working time monitoring

## Optimised planning

By acquiring the Kelio time and attendance management software, C.I.D also wanted to ensure **it complied with legal and regulatory requirements** and its own collective agreement when performing staff planning, including maximum daily activity time (maximum 12 hours over six consecutive days), weekly work hours (60 hours), rest time between two working days, etc.

*“Kelio allows us to automatically check constraints because we receive an **alert in the event of an anomaly**. We used to check everything manually and there was a high risk of error. It was also very time-consuming. Now **we can be sure that we comply with current legislation** and don't schedule the same person for two different tasks at the same time.”*

## Reliable analytical working time monitoring

The Kelio time and attendance management software also allows C.I.D to conduct **analytical working time monitoring**: when schedules are being drawn up, each employee is allocated tasks and/or events, and the time devoted to an event is automatically added up.

By conducting this **analytical accounting** the company is able to **calculate the profitability of each event**.

## Numerous advantages

The human resources department is extremely satisfied with Kelio and benefits from the following advantages:

- **Help to identify labour needs** and perform planning,
- Ability to ensure **compliance with legislation** in force,
- A **reliable analysis of time spent** on each event, and therefore costs.

*“During installation, the training technicians listened to our problems and provided solutions with adapted settings. Today, **we have a simple, reliable tool that allows for optimal planning** and easy comparison of estimated and actual totals”, explains Bruno Villaverde.*
