Vente-privee.com has placed its trust in Bodet Software to secure its premises

Vente-privee.com, a sales events website, reported a turnover of 1.073 billion euros with a staff of 1,800 employees.
"We chose Kelio Security because its technology and features were one step ahead"

Choosing a centralised web solution

Vente-privee.com is an **online shopping destination that organises 4,350 sales events a year** for its 16 million members in Europe (France, Germany, Spain, Italy, Great Britain, the Netherlands, Austria and Belgium) and the United States (in partnership with American Express).

Since 2011, vente-privee.com has also diversified its web agency and advertising agency activities with Digital Factory.

Vente-privee.com has grown rapidly since it was founded in 2001. It currently has a turnover of 1 billion euros and employs **1,800 people**.

In 2008, vente-privee.com launched a bid for tenders to secure access to its head office in La Plaine Saint-Denis (Paris region).

"Our six warehouses were already equipped with standalone access management solutions. But we needed to secure our head office by installing a *centralised access control solution and a web interface in order to allow several people to use the solution simultaneously from their own desktop",* explains Nicolas Pellegrin, IT Security Manager.

After studying the various tenders, vente-privee.com chose Bodet Software and its Kelio Security solution to secure its buildings.

In brief

Context

Activity:	Online shopping
Staff:	1,800 employees
Solution:	Kelio Security

Advantages

- Building access security system
- Ensures compliance with CNIL (French data protection authority) requirements
- One badge for several uses

"We chose Kelio Security because its technology (Web interface) and features were one step ahead. Bodet Software also had the stronger hand for the following reasons:
- *the relevance of the solution proposed,*
- *its value for money,*
- *and its highly motivated sales teams which was permanently available to answer our pre-sales questions. "*

Ensuring compliance with CNIL (French data protection authority) requirements

This access control project also aimed to **ensure compliance with CNIL (French data protection authority) requirements regarding the security of personal data**.

In fact, with 16 million members, vente-privee.com collects a variety of personal data and must take the necessary measures to protect this data both physically (security of premises) and logically (IT systems security).

"We are regularly controlled by CNIL. Thanks to the Kelio Security access control system, we can give all the necessary security guarantees regarding the physical security of our data. "

In order to know exactly who is physically present on the premises, **security turnstiles** have been installed.

And to make life easier for employees, the access control badge customised with their photo can also be used in the canteen, at drinks machines, or even to pay in the internal stock clearance store.

Some fifty profiles were set-up to define schedules and authorised access areas. For example, only motorcyclists have access to the motorcycle parking space and only the IT department can access the clean room.

"We were extremely satisfied with the installation: all of the projects were completed on time despite our last minute changes. "

A scalable project

The implementation of Kelio Security was also **warmly welcomed by security staff** who felt better supported in their task of securing the building and are, as a result, more closely involved.

"Since the first installation in 2009, we have added new projects every year. After equipping the campus and studio with Bodet Software solutions by replacing the old digital entry systems, we are going to gradually deploy Kelio Security in our warehouses in 2012", concludes Nicolas Pellegrin.
